

CLAIM AMENDMENTS

1. (Amended) A projection type display apparatus comprising:

a first projection optical system for obliquely projecting light from an original picture onto a predetermined surface, said first projection optical system forming the intermediate image of the original picture on or near said predetermined surface;

a second projection optical system for obliquely projecting the light from said predetermined surface onto a surface for projection and imaging it thereon;

light deflecting means disposed between said first projection optical system and said second projection optical system for deflecting the light emerging from said first projection optical system;

at least one reflecting mirror which is so disposed as to be substantially parallel with the surface for projection in an optical path between the original picture and the surface for projection; and

wherein the optical axis of said first projection optical system is deflected by said light deflecting means to substantially coincide with the optical axis of said second projection optical system.

11. (Amended) A projection type display apparatus according to Claim 1, further comprising a plurality of [vertically or substantially vertically disposed reflecting mirrors] reflecting mirrors which are so disposed as to be substantially parallel with the surface for projection.
